

ABSTRACT OF THE DISCLOSURE

There is disclosed a sheet post-processing device which can staple a corner of a sheet bunch conveyed from an image forming device and makes a transverse width of a housing smaller or compact. By disposing a stapler in one end on a sheet processing tray inside a sheet conveying port, the transverse width of the housing is made smaller. For this purpose, the sheet post-processing ^{stores} ~~device is provided~~ with ~~storage means for storing~~ sheets conveyed from the image forming device, ^{matches} ~~matching~~ means for matching the sheet bunch stored ^{staples} ~~in the storage means~~, ~~stapling means~~ for stapling the matched sheet bunch and ~~transfer means for once transferring~~ the ^{matched} ~~sheet bunch matched by the matching means~~ toward the other end of the sheet bunch and subsequently ~~transferring~~ ^{staples} ~~the sheet bunch stapled by the stapling means~~ toward one end of the sheet bunch.
